REPORT LIMITATIONS

This report has been prepared for the sole and exclusive use of the client indicated above and is limited to an impartial opinion which is not a warranty that the items inspected are defect-free, or that latent or concealed defects may exist as of the date of this inspection or which may have existed in the past or may exist in the future. The report is limited to the components of the property which were visible to the inspector on the date of the inspection and his opinion of their condition at the time of the inspection.

INICODMATION

ROOF COMMENTS

General Note: Our roof inspection is to report on the type and condition of the roofing materials, missing and/or damaged materials and attachments. (excluding ancillary items such as antennas, satellite dishes, solar panels, etc.) This does not constitute a warranty, guarantee, roof certification or life expectancy evaluation of any kind. Roofs are not water tested for leaks. Condition of the roof underlayment is not visible and therefore cannot be evaluated. Structures that have concrete tile, clay or wood shake/shingle materials that are going to be tented for fumigation are advised to be reinspected for damage caused after the tent is removed and prior to the close of escrow.

Information Note: Some of the down spouts have underground drains. These are noted but not tested.

1.) The sealant needs to be reapplied at the top of the hip above the garage.

Information Note: There is no water proofing fabric installed below the hip tiles. Although some roofing contractors argue that this is not technically required, many roofers consider this installation to be standard practice. (Note: Technically this was not required until 2003)

INSPECTION PHOTOS

Deteriorated sealant at the top of the hip above the garage.

No water proof fabric below the hip and ridge roof tiles.

HEATING & COOLING COMMENTS

Our inspection of the major HVAC systems is limited to the normal functions of the systems. Independent evaluations including adequacy/inadequacy of heating and cooling systems (such as cracked heat exchangers, air conditioning pressure tests, coolant charge, line integrity, air balance or evaporative cooling coils, etc.) are not within the scope of this inspection. Thermostats are not checked for calibration or timer functions. Normal service maintenance of these systems is recommended to be performed annually.

General Note: Forced Air Heating systems greater than 15 years old and Air Conditioning & Heat Pump systems greater that 10 years old are considered at the end of a normal life expectancy by the standards of most manufactures and tradesmen. The inspector will operate these systems to see if they are functional at the time of inspection however, they may be subject to failure at any time. If concerned about life expectancy of these systems, it is advised to have these systems fully evaluated by a qualified and licensed HVAC Contractor prior to close of escrow.

PLUMBING COMMENTS

The water temperature is not tested or verified. Water that is hotter than the manufacturers recommended setting is a scalding hazard. The water temperature should never be set higher than the manufacturers recommended setting. We recommend that the temperature setting on the hot water heater be checked at move-in for safety.

Shutoff valves and angle stops at kitchen or bathrooms sinks and toilets are not tested due to the possibility of leaking.

Information Note: The water pressure was measured at 55 psi at the time of inspection. This is within a normal and acceptable range. Since the house is equipped with a pressure regulator it should be monitored and retested periodically to ensure that the pressure is below the maximum allowable 80 psi.

Information Note: There is a septic system installed at the property. Evaluation of the septic system is beyond the scope or expertise of this inspection. Recommend evaluation by a qualified and licensed Septic Company prior to close of escrow.

Information Note: There are water softener and reverse osmosis systems installed in this home. These systems are inspected for leaks but chemical testing of the water and operation of the units are outside the scope or expertise of this inspection.

ELECTRICAL SYSTEM COMMENTS

19 Information Note: There is furniture and storage throughout the home and garage which may conceal faulty wiring and restricts the ability to test all of the outlets.

Maintenance Note: The circuit breakers in the main electrical service panel are not fully labeled.

safety Hazard Note: One of the GFCI outlets on the post by the driveway is defective and will not reset.

Deficiency Summary

Terry Home Inspection Services, Inc. PO Box 2705 Atascadero, CA 93423 (805) 434-2694

Insp Date: 2/23/2023 210 Foxtail Lane File # 19123

NOTE: The client(s) is/are strongly advised to further investigate, or contract with qualified and/or licensed appropriate tradesperson to further investigate, the complete extent of possible repairs and associated costs with all the items in the body of the report not listed as "Acceptable" or "Functional" PRIOR TO CLOSE OF ESCROW.

Mold, mildew, fungus and other microbial organisms commonly occur in areas that show evidence of or have the potential for leaking, moisture intrusion and/or inadequate ventilation. The identification of or presence of these organisms is beyond the scope of this inspection. If concerned about this possibility, we recommend further investigation be performed by a Certified Industrial Hygienist to determine if there exists an active (or potential for) infestation or climate for incubation of a microbial contamination prior to close of escrow.

Product recalls and consumer product safety alerts are added almost daily. If client(s) is/are concerned about appliances or other items in the home that may be on such lists, client(s) may wish to visit the U.S. Consumer Product Safety Commission (CPSC) web site at www.recalls.com

The presence of environmental hazards, materials or conditions including, but not limited to, lead, asbestos, radon, toxic, combustible or corrosive contaminates is outside the scope of this inspection. If client(s) is/are concerned regarding these matters, it is recommended to obtain the consultation services of an appropriate and qualified tradesperson who specializes in these types of investigations and evaluations.

Important Note to prospective buyers:

If this inspection was performed and the report prepared for a "Listing Inspection" for the seller, the report may be relied on (within the scope of the original contractual agreement) by the seller of the property. The subsequent buyer of the property may rely on the report prepared, if the buyer executes a Post Inspection Agreement with the inspector, participates in a consultation and pays the requisite fee, all of which must be done prior to closing escrow on the property. The report is not intended to be distributed to any individual or entity not a party to the original contractual agreement or a post inspection agreement.

ROOF

1.) The sealant needs to be reapplied at the top of the hip above the garage.

Information Note: There is no water proofing fabric installed below the hip tiles. Although some roofing contractors argue that this is not technically required, many roofers consider this installation to be standard practice. (Note: Technically this was not required until 2003)

EXTERIOR

- 1.) The following windows are fogged: (See info note above.)
 - A.) The fixed window on the west wall in the kitchen nook.
 - B.) The upper fixed half of the single hung window in the kitchen nook.

HVAC

General Note: Forced Air Heating systems greater than 15 years old and Air Conditioning & Heat Pump systems greater

The report is provided as a courtesy for quicker access to DEFICIENCIES within the inspection report. This is not intended as a substitute for reading the inspection report. Items listed may be discussed further on the corresponding report page. There also may be findings other than what is listed on this page.

Deficiency Summary

Terry Home Inspection Services, Inc. PO Box 2705 Atascadero, CA 93423 (805) 434-2694

Insp Date: 2/23/2023 210 Foxtail Lane File # 19123

that 10 years old are considered at the end of a normal life expectancy by the standards of most manufactures and tradesmen. The inspector will operate these systems to see if they are functional at the time of inspection however, they may be subject to failure at any time. If concerned about life expectancy of these systems, it is advised to have these systems fully evaluated by a qualified and licensed HVAC Contractor prior to close of escrow.

PLUMBING

Information Note: There is a septic system installed at the property. Evaluation of the septic system is beyond the scope or expertise of this inspection. Recommend evaluation by a qualified and licensed Septic Company prior to close of escrow.

Information Note: There are water softener and reverse osmosis systems installed in this home. These systems are inspected for leaks but chemical testing of the water and operation of the units are outside the scope or expertise of this inspection.

ELECTRICAL

Maintenance Note: The circuit breakers in the main electrical service panel are not fully labeled.

safety Hazard Note: One of the GFCI outlets on the post by the driveway is defective and will not reset.

KITCHEN & LAUNDRY

Fire Safety Maintenance Note: The dryer lint exhaust vent needs to be cleaned annually to prevent a back up of lint which is a very common cause of a residential fire. In most cases owners never have the lint vent cleaned. It is recommended to have the dryer lint exhaust vent professionally cleaned prior to the installation of the dryer and then annually after that.

BATHROOM

Maintenance Note: The toilet in the master bathroom is loose. Recommend replacement of the wax seal and properly securing the toilet. (Note: This may be due to a broken flange)

Maintenance Note: There is a faulty diverter valve at the tub/shower in the hall bathroom. This allows water to partially flow out the tub spout when the shower is operated.

1.) There is a slow drain at the sink in the hall bathroom.

INTERIOR

Safety recommendation: The smoke detectors are tested during the inspection however, this only determines that they are functional on the day of the inspection. Smoke detectors can fail at any time. Retest all of the smoke detectors during the final walkthrough and again upon moving in. We recommend installing new batteries in all of the smoke detectors upon moving in and testing weekly as recommended by the Consumer Product Safety Commission.

ATTIC

1.) There is some fungus damage adjacent to the skylight above the master bathroom as seen from inside the attic.

The report is provided as a courtesy for quicker access to DEFICIENCIES within the inspection report. This is not intended as a substitute for reading the inspection report. Items listed may be discussed further on the corresponding report page. There also may be findings other than what is listed on this page.
