Report Summary

The summary below consists of potentially significant findings. These findings can be a safety hazard, a deficiency requiring a major expenses to correct or items I would like to draw extra attention to. The summary is not a complete listing of all the findings in the report, and reflects the opinion of the inspector. Please review all of the pages of the report as the summary alone does not explain all the issues. All repairs must be done by a licensed &bonded trade or profession. I recommend obtaining a copy of all receipts, warranties and permits for the work done.

|---|------------------------|--|
| Grounds | T | |
| Page 5 Item: 12 | Plumbing | The inspector did not see a main water shutoff at the home. There should be a shutoff in the meter box though. |
| Roof | | |
| Page 9 Item: 6 | Vent Caps | • The seals around the plumbing vents on the east side of the home have failed. |
| Electrical | | |
| Page 13 Item: 2 | Main Amp Breaker | • The maximum service to the home was limited by the size of the fuses in the main panel. The smallest fuse was 40amps. This may not be enough for your electrical needs |
| Page 14 Item: 6 | Fuses | The fuses used in the main panel and subpanel can easily be oversized, and this can result in overheating. Double tapping noted in the subpanel. Some of the wiring in the subpanel appeared to solid aluminum. When viewed through an infrared camera the left leg of the main fuse block showed a temperature anomaly that indicates overheating when compared to the rest of the panel. Cause unknown. |
| Heat/AC | | |
| Page 15 Item: 1 | Heater Condition | Rust noted in the burner compartment of the furnace. The area was dry at time of inspection but the rust indicates at least a past leak. |
| Page 16 Item: 8 | Air Supply | Recommend cleaning condenser fins. |
| Water Heater | | |
| Page 17 Item: 2 | Base | • A drip pan was not present under the water heater, however, this was not required at time of construction. |
| Page 17 Item: 10 | Overflow Condition | • The termination of the overflow line was not visible. It may terminate in the crawlspace. |
| Bedrooms | | |
| Page 18 Item: 5 | Electrical | Ungrounded three prong outlets noted. |
| Bathrooms | | |
| | | |
| Page 20 Item: 7 | GFCI | GFC outlets not present at time of inspection. |
| Page 20 Item: 7 Page 21 Item: 16 | | GFC outlets not present at time of inspection.The tub was slow to drain. |

| Page 21 Item: 16 Page 21 Item: 18 Kitchen | Bath Tubs Sinks | The tub was slow to drain. The bathroom sink was slow to drain. |

| Page 25 Item: 12 | Plumbing | • The inspector did not see a P-trap in the stand pipe for the washing machine. The lack of odor from the stand pipe may indicate it does not drain properly. |
|------------------|-----------------|---|
| Page 25 Item: 16 | Doors | • The glass in the door between the kitchen and laundry room was not labeled as glass. |
| Interior Areas | | |
| Page 26 Item: 6 | Electrical | Ungrounded 3 prong outlets noted. |
| Page 26 Item: 8 | Smoke Detectors | • The CO detector was not installed within 15' of the sleeping rooms. |

Inspection Details DEFINITIONS

Apparent Conditions: Systems and components are rated as follows:

Satisfactory (Sat.)- Indicates the component is functionally consistent with its original purpose but may show signs of normal wear and tear and deterioration.

Fair- indicates the component could require repair or replacement within five years.

Poor- Indicates the component will need repair or replacement now or in the very near future.

N/A- Not applicable or the component is not present.

None- Not present.

1. Attendance

In Attendance: No one present at time of inspection.

2. Home Type

Home Type: Single Family Home • Single Story

3. Occupancy

Occupancy: Occupied - Furnished. Furniture and personal items can restrict view of the home. • The utilities were on at the time of inspection. • Due to the age of the home this report should not be considered to be a complete and exhaustive list of all condition, concerns or issues with the home. Heat/AC

The heating, ventilation, and air conditioning and cooling system (often referred to as HVAC) is the climate control system for the structure. The goal of these systems is to keep the occupants at a comfortable level while maintaining indoor air quality, ventilation while keeping maintenance costs at a minimum. The HVAC system is usually powered by electricity and natural gas, but can also be powered by other sources such as butane, oil, propane, solar panels, or wood.

The inspector will usually test the heating and air conditioner using the thermostat or other controls. For a more thorough investigation of the system please contact a licensed HVAC service person.

Bathrooms

Bathrooms can consist of many features from jacuzzi tubs and showers to toilets and bidets. Because of all the plumbing involved it is an important area of the house to look over. Moisture in the air and leaks can cause mildew, wallpaper and paint to peel, and other problems. The home inspector will identify as many issues as possible but some problems may be undetectable due to problems within the walls or under the flooring.

Interior Areas

This area includes individual finds of specific interior items in the home. Only the specific items outlines in this section were inspected. Within these areas the inspector is performing a visual inspection and will report visible damage, wear and tear, and moisture problems if seen. Personal items in the structure may prevent the inspector from viewing all areas on the interior.

The inspector does not usually test for mold or other hazardous materials. A qualified expert should be consulted if you would like further testing.
