Energy credits (1): Total credits calculated based on the amount of energy you export during the current bill period.

Energy charges (2): If the total energy credits earned year-to-date do not cover the electricity used, the difference becomes a charge.

Year-to-date credits or charges (3) and (4): Shows the total of all your monthly energy charges and/or credits for all months since your Settlement Period began.

Year-to-date kWh (5): Shows the total of all your monthly kWh for all months since your Settlement Period began. If at the end of your Settlement Period, this is a negative amount of kWh, it will be used at that time to calculate the Net Surplus Compensation (NSC) value.
