

Disclaimer: Depending on your location, zip code, county, or city may better generate electricity rates for your area. CARE and/or EV rate comparisons may not be available to display for all electric power providers. Find them on [PG&E's CCA rate comparison page](#), [SCE's CCA rate comparison page](#), and [SDG&E's CCA rate comparison page](#). Electric utilities provide data as displayed after validation by the relevant community choice aggregator (CCA). The CPUC does not verify the provided data. Please contact your utility or CCA for further information. GHG emissions intensities for each Electric Power Generation Mix are from the previous year and disclosed in annual [Power Content Labels](#) required by the California Energy Commission's Power Source Disclosure program. Rates for [municipal utilities](#) are not available on this webpage, but rates may be obtained by contacting them. [Assembly Bill 1362](#) called for these rate comparison webpages for electric consumers like you.

Residential Rate Comparison

San Diego Community Power (SDCP)/SDG&E

This compares electricity costs for an average residential customer in the SDCP/SDG&E service area based on average monthly usage (kWh). This is based on a representative 12-month billing history for all Residential and EV rate schedules for SDG&E and SDCP's published rates as of

February 1, 2023.

Generation Rate

Generation Rate is the cost of generating and/or purchasing electricity to power your home or business. The generation rate varies based on your energy provider and the resources included in your energy provider's generation power source.

Utility Delivery Rate

SDG&E Delivery Rate is SDG&E's charge to deliver electricity to your home or business. The electric delivery rate may vary depending on your rate and electricity use, however, it is charged equally to customers regardless of who provides their electric generation.

Surcharges

The PCIA is a charge to recover costs associated with power purchases made on behalf of customers, prior to a customer's switch to a CCA. The FF is a surcharge applied to electricity transported over SDG&E systems that are constructed in public streets and highways. SDG&E collects the surcharge from customers and remits them to the appropriate municipality. The surcharge is charged equally to customers regardless of who provides their electric generation. The PCIA and the SDG&E commodity portion of the FF are included within the generation rate of SDG&E's standard bundled service.

Electric Power Generation Mix

As reported by SDG&E to the California Energy Commission's 2021 Power Source Disclosure Program. **Unspecified sources of power refers to electricity that is not traceable to a specific generating facility, such as electricity traded through open market transactions. Unspecified sources of power are typically a mix of all resource types, and may include renewables.

Contact/More Info/Privacy

Please visit sdge.com/cca for the complete SDG&E/SDCP rate comparison or call 800-411-7343. For information on SDCP's generation rates, please visit SDCommunityPower.org or call 888-382-0169

Disclaimer

The eligible renewable percentage above does not reflect RPS compliance, which is determined using a different methodology. 2 Unspecified power is electricity that has been purchased through open market transactions and is not traceable to a specific generation source. 3 Renewable energy credits (RECs) are tracking instruments issued for renewable generation. Unbundled renewable energy credits (RECs) represent renewable generation that was not delivered to serve retail sales. Unbundled RECs are not reflected in the power mix or GHG emissions intensities above.
