

SOLAR PANELS – MAJOR OPERATING AND TRANSPORTATION EXPENSE SAVING

Since installing solar panels in 2014, the owners have had no electricity bills to pay including for heat, AC and cooking. Additionally, they have received nearly \$2,000 back from SDG&E and continue to enjoy a credit of between \$500 - \$1,000 with the utility company. This also includes the charging of two electric cars eliminating the need to pay for any gasoline since the installation of the panels.
