The pest control industry recognizes a structure to have certain areas both inaccessible and not inspected which are considered impractical to inspect, including but are not limited to: The interiors of hollow walls, and all enclosed spaces, such as between a floor or porch, deck and the ceiling or soffit below; areas where there is no access without defacing or tearing lumber, masonry or finished work; Portions of the attic concealed or made inaccessible by insulation or portions of the attic concealed or made inaccessible by ducting or portions of the attic of roof cavity concealed due to inadequate crawl space. Interiors of enclosed, boxed eaves, portions of the sub area concealed or made inaccessible by ducting and or concealed by insulation. Enclosed bay windows. Areas beneath wood floors over concrete. Areas concealed by built-in cabinetwork. Areas concealed by floor coverings, areas underneath, behind or below appliances, or furnishings or storage, locked areas and areas requiring an extension ladder. Slab floor construction has become more prevalent in recent years. Floor covering may conceal cracks in the slab that will allow infestations to enter. Plaster or sheet-rock or other wall coverings may conceal infestations so that a diligent inspection may not uncover the true condition. The roof was not inspected due to lack of accessibility, qualification and licensing. These areas are not practical to inspect because of health hazards, damage, obstruction unless specified or described in this wood destroying pests and organisms inspection report. 1 Stop Pest Control shall exercise due care during inspections and treatments but assumes no liability for any damage to tiles, slates, shingles or other roofing materials, including patio covers aluminum awnings, solar heating, plant shrubbery or paint during any type of treatment or repair. In the performance of corrective measures, it may be necessary to drill into concealed areas.

1 Stop Pest Control will not be liable for damage to hidden plumbing, electrical conduits or ducts or damage to floor coverings or for the relaying of floor coverings or carpeting in the course of our work. It may be necessary to cut or remove plants. We will be as careful as possible but we will not be responsible for plant damage during treatments and or repairs.

This report includes findings relating to the presence/nonpresence of wood destroying organisms and/or visible signs of leaks in the accessible portions of the roof. The inspector did not go onto the roof surface due to possible physical damage to the roof, or personal injury. No opinion is rendered nor guarantee implied concerning the watertight integrity of the roof or the condition of the roof and roofing materials. If you want the water tightness of the roof determined you should contact a roofing contractor who is licensed by the State of California Contractors Board.

This Wood Destroying Pest & Organisms Report DOES NOT INCLUDE MOLD, non-destroying wood fungi, or any mold-like conditions. By California law we are neither qualified, authorized or licensed to inspect for health-related molds or fungi. Mold is not a Wood Destroying Organism and is outside the scope of this report as defined by the Structural Pest Control Act. No reference will be made to mold or mold-like conditions. If you desire information about the presence of health related mold you should contact an industrial hygienist or the appropriate mold professional.
